

STRUCTURAL PALLET RACKING

Information Sheet

PRODUCT

Made from hot-rolled structural steel sections, Structural Pallet Racking is a more robust alternative to conventional pallet racking.

Structural Pallet Racks are more resistant to forklift truck damage and are more suitable and resistant to harsh conditions when used externally.

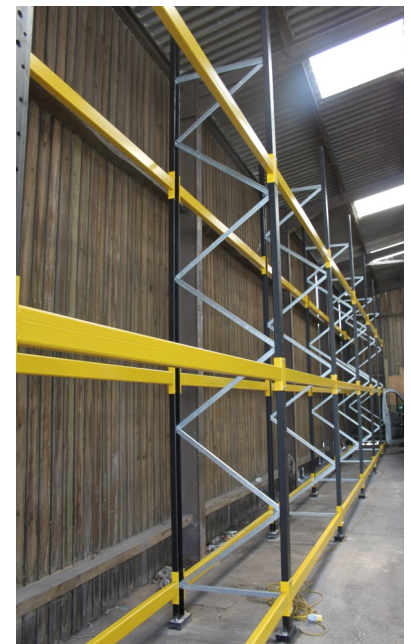

STANDARD RANGE

- Bay depth of 900 or 1100mm
- Beam length of 2700, 3300 or 3900mm
- 15,000kg maximum frame load
- 3,000kg maximum beam load
- Standard height of up to 6m
- Bespoke rack dimensions available on request

FEATURES

- Vertically adjustable beams on a standard pitch of 100mm
- Painted Black as standard (other paint finishes available) or Galvanised for external applications

OPTIONS

- Fitted with roof, cladding and doors/curtains for external storage
- Steel or timber decks
- Pallet support bars
- Fitted or adjustable fork entry bars
- Back stops
- Fitted with Guide Rail Systems for additional protection from forklift damage
